

mini-simulation tank instruction

Item no:2117

Name of product:mini RC simulation tank

Product features:

Playing time:10-15 minutes(equipped with large capacity battery)

Remote control distance:>20 meters;

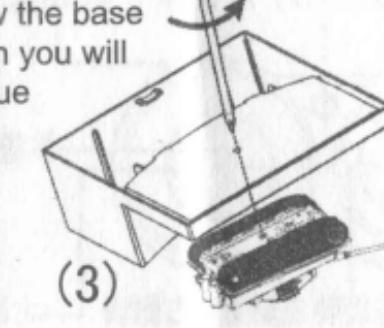

Better function:using simulation tank chain which increase the speed and enhance the sensitiveness of movement.

Great performance:reliable frequency selection and strong anti-interference ability.

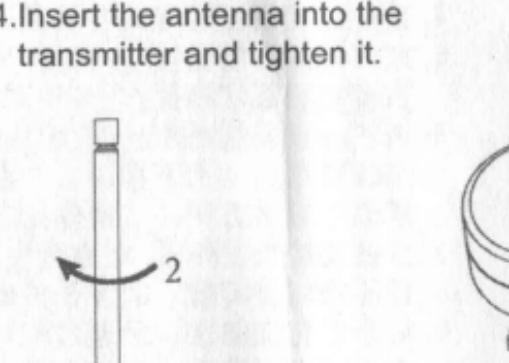

Automatic demonstration:this product has Automatic demonstration

Preparation:

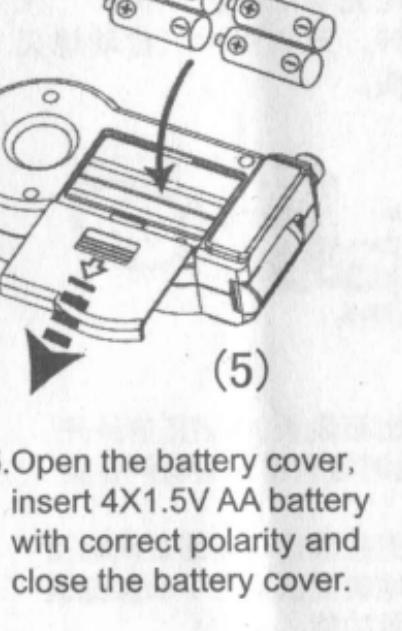

1.Remove the transparent tape and take out the plastic cover box as the arrow pointed.

2.open the cover and take out the transmitter and antenna.

4.Insert the antenna into the transmitter and tighten it.

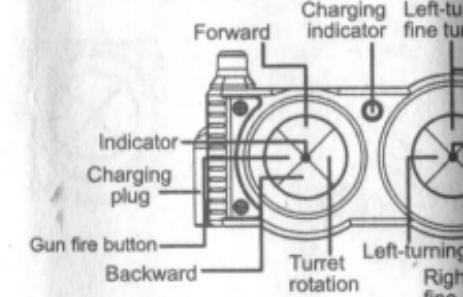

Charging:
Open the transparent cover and pull out the charging plug, insert the charging plug into the charging interface on the bottom of the tank, you will see the charging indicator lighting up, after 20-30 minutes, charging indicator will be off which mean the tank is fully recharged, at the end , please pull out the charging plug.

5.press the "forward" button and "left-turning" around to the left, switching between "forward" and "right-turning" button will make the tank spin
6.press the "turret rotation" button, the tank turn barrel will have aiming function(moving up tank under static state or moving state, intend the Rotation direction of the turret.(mean when sounds)
7.press the "Gun fire " button on the transmitter and impulsive force dynamic effect.
8.press the "turret rotation" button meanwhile demonstration" button for 3 seconds, this a
9.If the tank deflect to one side when going forward, the tank goes along a straight line.(if deflected to the right, press"left-turning fine tuning" button)

Operation:
1.Fully extend the antenna when playing, turn the power switch on the tank to "ON" position.
2.when press the "high/low speed conversion" button, the tank will switch between high and low speed.Press this button for 3 seconds and the tank will have Automatic demonstration.
3.press the "forward" or "backward" button, the tank will go forward or backward, meanwhile interval click the "left-turning" or "right-turning" button will change the running direction.(tank will have a running sound under this action)
4.press the "left -turning" button or "right turning" button , the tank will spin around clockwise or anticlockwise

Caution:

- 5.press the "forward" button and "left-turning" button at the same time, the tank will spin around to the left, switching between "Forward" "backward", "left-turning" and "right-turning" button will make the tank spin around with different direction.
- 6.press the "turret rotation" button, the tank turret will have a 360-degree rotating. The gun barrel will have aiming function(moving up and down) when the turret rotates. When the tank under static state or moving state, intend click the "turret rotation" button will change the Rotation direction of the turret.(mean while the turret will send out machinery movement sounds.)
- 7.press the "Gun fire" button on the transmitter, the tank will have firing projectile sounds and impulsive force dynamic effect.
- 8.press the "turret rotation" button meanwhile press the "high /low speed conversion/Automatic demonstration" button for 3 seconds, this action will turn on/off the sounds.
- 9.If the tank deflect to one side when going forward, then you need to make fine tuning, if the tank goes along a straight line,(if deflect to the left,press "right-turning fine tuning", if deflect to the right,press "left-turning fine tuning")

Operation:

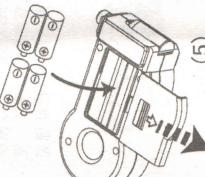

- 1.Fully extend the antenna when playing, turn the power switch on the tank to "ON" position.
- 2.when press the "high/low speed conversion" button, the tank will switch between high and low speed.Press this button for 3 seconds and the tank will have Automatic demonstration.
- 3.press the "forward" or "backward" button, the tank will go forward or backward, meanwhile(ten seconds) click the "left-turning" or "right-turning" button will change the running direction.(tank will have a running sound under this action)
- 4.press the "left-turning" button or "right turning" button , the tank will spin around clockwise or anticlockwise

Charging:
Open the transparent cover and pull out the charging plug, insert the charging plug into the charging interface on the bottom of the tank. You will see the charging indicator lighting up, after 20-30 minutes, charging indicator will be off which mean the tank is fully recharged, at the end , please pull out the charging plug.

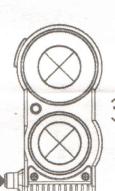

Operation:

- 5.Open the battery cover, insert 4x1.5V AA battery with correct polarity and close the battery cover.

- 5.Open the battery cover, insert 4x1.5V AA battery with correct polarity and close the battery cover.

(4)

(4)

- a)Do not touch the antenna during operation, or the remote control distance will be affected.
- Breaking antenna needs to be handled by adult.
- b)If the tank becomes apparently slow during operation, this may due to insufficient power, please charge the tank as this manual describes.
- c)The tank cannot be charged when the transmitter is lack of power, this happens when the transmitter's indicator light goes dim or be off, please replace the old batteries.
- d)Pay attention to the charging plug and interface when you charge the tank.
- e))When not using the tank for a long period, please remove the battery from the transmitter and turn off the tank.
- f) Non-rechargeable battery cannot be charged.
- g)Please do not mix with old and new batteries or different type of batteries.
- h)Pay attention to the "+","-" polarity of the battery when installing.
- i)Avoid short circuited by the "+" "-" polarity on the battery.
- j)When removing the package ,please make sure there is adult present.
- k)Keep this manual for future reference.

Battery recycling:

- 1.Please DO NOT dispose this equipment as daily trash. Damaged or exhausted battery should be put into a special-designed container.
- 2.This equipment is composed of electronic component and batteries, they belong to electronic trash, please process it by particular requirement.
- 3.Please be familiar with your local trash processing way.
