## NAMES OF CONTROLLER

## WIFI MODE INSTALLATION

## DOLL AND PARACHUTE INSTALLATION

### Doll installation

Hold the speed switch and then turn on the power switch to enter parachute mode.

Hold ↓

## QUADCOPTER BATTERY INSTALLATION

1. Install the battery module in the orientation shown in the figure to the battery holder of the body. (Pic.1)
2. The battery module is installed. (Pic.2)

## CHARGING BATTERIES

1. Please make sure that USB port and power supply are connected closely and directly until the guidance light is on, which indicates that the battery turns to a charged condition. (Pic.1)
2. After charging for about 30 minutes, charging light off when full. (Pic.2)

## CAUTIONS WHEN CHARGING:

1. When charging, please put this product on a dried or ventilated area, To avoid the fire, please don't keep the battery on or near the blanket when charging. To avoid the explosion, please don't charging the battery near a heat source such as fire or heater.
2. To ensure safety, please use our factory original USB charger when charging our product. When charging should be supervised by an adult so as not to cause an accident.
3. After flying, please do not charge the Quadcopter if the surface temperature is still not cool. Otherwise it may cause a swollen battery or even a fire hazard.
4. Please don't charging when the drone is heat after operation.
5. A battery when not in use for a long time will lose it's charge automatically. Charging or discharging too often may reduce the life of the battery.

**Disclaimer: We are not responsible for any damage caused by improper charging.**

# CONTROLLER BATTERY BATTERY INSTALLATION

1. Loosen the fastening nut on the battery cover with a screwdriver.

Take out the battery cover.(Pic .1)

2. Put 2X1.5V "AAA" batteries in the battery compartment as per the polarity shown inside. (Pic .2)

3. Close the battery cover. (Pic .3)

Note:

Batteries should be inserted with the correct polarity.

**⚠ WARNING**

1. Do not mix different types of batteries.
2. Do not mix old and new batteries.
3. Install batteries with correct polarity.

## READY TO FLY

1. Unfold the quadcopter and place it on a horizontal position, then open up the power switch on the quadcopter. When the indicator lights flash, it means that the quadcopter goes into the flight standby mode.

Note: The antenna of the transmitter must be aligned the tail of the quadcopter.

2. Open up the power switch of the transmitter. Push the left lever (accelerator) to the highest point and then reset to the lowest point. When the light in the quadcopter change to continuous lighting, it means that binding successfully.

3. Push the left and right lever at the same time to bottom left in 45 degree. The quadcopter's light stops flash and always light up, it means that compass adjustment successfully.

4. Push the left and right lever at the same time to bottom right in 45 degree. The quadcopter's light stops flash and always light up. At the same time, the transmitter buzzer beep once, it means that horizontal adjustment successfully.

## OPERATING DIRECTION

Push the accelerator up or down, the quadcopter flies upward or downward.

Push the direction control stick up or down, the quadcopter flies forward or backward.

Push the accelerator left or right, the quadcopter turns to left or right.

Push the direction control stick left or right, the quadcopter flies to left side or right side.

## FINE-TUNING OPERATION

When the quadcopter keeps flying forward / backward, you can adjust it by pressing fine-tuning button down/up.

When the quadcopter keeps flying to left / right side, you can adjust it by pressing fine-tuning button right / left.

## 3D FLIPS (PLEASE DON'T USE THE FLIP FUNCTION WHEN THE DRONE UNDER PARACHUTE MODE.)

3D Flips instructions When you are familiar with basic operation, you can do some awesome & exciting tricks an stunts! First of all, fly the drone to a height of more than 3 meters, press the 3D Eversion switch on the rear right side of the transmitter, then push the right rudder (in any direction) to make 360 degree flip.

## HIGH AND LOW SPEED SWITCHING

During the flight of the quadcopter, the flight speed can be switched by pressing this button while it forward, backward, turn left and turn right. The quadcopter speed defaults to a low speed. Press this button once to switch to medium speed. At the same time, the transmitter buzzer beeps twice. Press the button again to switch to high speed. At the same time, the transmitter buzzer beeps three times. One more pressing turn back to low speed and beep once.

# INSTRUCTIONS FOR ALTITUDE-HOLD CONTROL

## STARTING THE QUADCOPTER

- Method 1: Press the one-key take-off key once and the quadcopter's propellers would rotate slowly and then lift off from the ground into the air.
- Method 2: Shift the two control sticks outwards into an "A" shape for about one second and the quadcopter's propellers would rotate slowly.

## TURNING OFF THE QUADCOPTER

- Method 1: After the quadcopter is started, turn the left and right joysticks of the remote controller downwards outer 45° at the same time. After about 1 second, the quadcopter is locked and the propeller stops rotating.
- Method 2: After the quadcopter is started, pull down the left joystick of the remote controller to the lowest position. About 3 seconds later, the quadcopter is locked and the propeller stops rotating.

## ONE-KEY LANDING

When the quadcopter is flying at high altitude, press the "One-key Landing" key once and the quadcopter would land slowly. At this time, you can move the quadcopter to a certain spot by using the direction-change or left control stick. The quadcopter's propellers will stop rotating

## EMERGENCY STOP

In case of emergency during the flight, long press the "emergency stop" button for Landing quadcopter, avoid injury.

## AUTOMATIC SPIRAL LANDING DEMONSTRATION

Press the demo button, and the drone will rotate to the left. Any action of right joystick can exit automatic demonstration.
